

Nanoscale Liquid Interfaces

Wetting, Patterning and Force Microscopy
at the Molecular Scale

edited by **Thierry Ondarçuhu** (CEMES-CNRS, France) &
Jean-Pierre Aimé (IECB-CBMN, France)

"This book offers a broad survey of single and multiphase flows at the nanoscale. Many topics of current interest are surveyed, including characterization of interfaces as well as various wetting phenomena. A reader will find many subjects discussed well, with a good interplay of experiments and modeling."

Prof. Howard A. Stone - Princeton University, USA

Key Features

- Provides a unique comprehensive review of the studies of liquid at nanometer scale, involving nanopatterning methods and atomic force microscopy in liquids. No book is currently available on the subject.
- Collection of 19 papers by an international panel of prominent scientists in the field, covering a wide spectrum of both theoretical and experimental aspects.
- Gather scientists to bridge studies of physical properties of liquid at nanometer scale with investigation of biological systems and molecules.

Description

This book addresses the most recent developments in the investigation and manipulation of liquids at the nanoscale. This new field has shown important breakthroughs on the basic understanding of physical mechanisms involving liquid interfaces, which led to applications in nanopatterning. It has also consequences in force microscopy imaging in liquid environment. The book proposes a timely review of these various aspects. It is co-authored by 25 among the most prominent scientists in the field.

Starting from a description of static and dynamic properties of liquids at interfaces, the recent works on nanowetting (droplets, meniscus and bubbles) are thoroughly described. The book then reviews some applications that emerge in the field of nanopatterning due to the development of new tools to manipulate ultras-small liquid quantities. Atomic force microscopy imaging in liquids raises new questions on hydrodynamic interaction in the confined space between an oscillating tip and a surface, especially for high-speed atomic force microscopes. The understanding of these interactions is of importance for the development of imaging of biological samples, which is one of the open challenges of the high-speed AFM techniques.

Table of Contents

Chapter	Author
Liquid Structure at the Solid-Liquid Interface	Suzanne P. Jarvis, Gillian Kaggwa, and Khizar Sheikh
Wetting, Roughness, and Hydrodynamic Slip	Olga I. Vinogradova and Aleksey V. Belyaev
Wetting Phenomena on the Nanometer Scale	S. Dietrich, M. Rauscher, and M. Napiorkowski
Stability of Thin Liquid Films	Gunter Reiter
Thin Films in Complete Wetting and the Specific Case of Nematic Liquid Crystals	A. M. Cazabat, U. Delabre, C. Richard, and Y. Yip Cheung Sang
Droplet Morphology at Nanometer Scale	Antonio Checco
Surface Bubbles in Micro- and Nanofluidics	Bram Borkent and Detlef Lohse
Use of Ultrasonic ShearWaves for the Study of Liquid Interfaces	Diethelm Johannsmann and Anne Finger
Nanomeniscus Mechanical Properties	Jean-Pierre Aime, Thierry Ondarcuhu, Rodolphe Boisgard, Laure Fabie, Mathieu Delmas, and Charlotte Fouche
Wetting in Carbon Inorganic and Organic Nanotubes and Nanochannels	Hannah Leese and Davide Mattia
Capillary Action in Silicon-Based Nanochannels	Joost van Honschoten, Nataliya Brunets, and Niels Tas
Manipulation of Liquid Nanodrops	Erik Dujardin, Thierry Ondarcuhu, and Laure Fabie
Field-Induced Nanoscale Water Bridges and Tip-Based Oxidation Nanolithography	Ricardo Garcia
Technological Applications of Dewetting	Fabio Biscarini, Denis Gentili, Emanuela Margapoti, and Massimiliano Cavallini
Directed Assembly of Particles through Convective Flows and Capillary Forces	Francois-Damien Delapierre, Jean-Louis Viovy, and Laurent Malaquin
Molecular Combing of DNA and Carbon Nanotubes by a Moving Meniscus	C. Khripin, A. Jagota, and M. Zheng
High-Resolution AFM Imaging of Native Biological Membranes	Lu-Ning Liu and Simon Scheuring
Molecular-Resolution FM-AFM Imaging of Biological Systems	Takeshi Fukuma
High-Speed AFM and Imaging of Biomolecular Processes	Toshio Ando and Takayuki Uchihashi
